

ABSTRACT

Topic: Freelancer's Hub

Project Nature: Mini Project Extension

Completion Level: Completion 40% of Mini Project

Freelancer's Hub is a web based application that gives exact results of your requirements. That means the freelancer can build a website based on user requirements. This website is useful for the users to get exact output related to various user's post. There is a database in which all the information is managed. The administrator act as the highest authority and has the rights to update the database.

This purpose is to give and excelled services, creating and appropriate online bidding websites. To provide fast and easy online bidding activities to outsourcer's with a user friendly online system. The system after careful analysis has been identified to be presented with the 3 modules. They are:

1.Admin module

The Admin manages the whole system like, view freelancer/outsourcer, approve freelancer and block freelancer and remove freelancer /outsourcer, and view outsourcer's post ,view tender details from freelancers, view notification details from outsourcers, view feedback, view payment details .

2.Freelancer module

The Freelancer can register in the particular site by giving his personal details and he will be giving a password to login. The freelancer is also known as programmer. The freelancer can update their own profiles. He can view posts, submitting tender, upload previous projects, view notification from outsourcers and view feedbacks. The freelancer can send message to the outsourcer .Freelancer can see questions from students. He can send answers for the questions, Each question is send to all the programmers and anyone can send answers, Programmer can upload tutorials about any language or technology with code, image, videos

3.Outsourcer module

The Outsourcer can register in the particular site by giving his personal details and he will be giving a password to login. He can upload posts, view tender by freelancer, send notification to the freelancer, view agreement, send feedback, compare projects of freelancer, online payments and outsourcer can send message to the freelancer, can send project requirements. Select programmer based on rating ,payment, etc. Outsourcer can send call letter to programmer by visiting their profile and based on project history and rating.

4.Student module

People belongs to this module includes the one who need help to improve his or her knowledge. Student can register and login to the system. Ask questions about any particular language or technology. The questions will be send to all freelancers, Also upload codes that contains errors or bugs, Can read or download tutorial and codes that uploaded by the freelancer.
